CreditGuard AI - Solution Overview

A practical decision-support workspace for portfolio risk analysts

WHAT IT DELIVERS

One workflow to understand portfolio risk, prioritize accounts, ask grounded questions and document anomaly decisions - without automating adverse action.

14,685	16.1%	0.675	0.265
loan accounts	observed defaults	holdout AUC	holdout KS

How an analyst uses it

- Scan exposure, defaults and risk segments
- Filter by product, region or employment
- Open an account and review its drivers
- Investigate and record anomaly decisions

AI features with human control

ASK THE PORTFOLIO

Verified aggregation first; OpenRouter wording second. Unsupported questions are declined.

ANOMALY REVIEW

Peer-relative flags include reason codes. The analyst confirms or dismisses every case.

Three portfolio signals - and why they matter

Mortgage | 24.7% default

Prioritize product-level underwriting and collections review.

Unemployed | 35.0% default

Validate income stability; avoid blanket segment exclusions.

South | 16.9% default

Check product and employment mix before changing limits.

Production path

Add point-in-time controls, durable review storage, access management, model registry, calibration and drift monitoring, fairness testing, audit logs and bank-approved OpenRouter data-processing terms.
